

Exploratory Data Analysis Report - Healthcare Dataset

1. Age Distribution (Histogram)

Observation:

- The age distribution is slightly right-skewed.
- Most patients are between 40 to 75 years old.
- Very few patients are below 30 or above 80.

2. Gender Count (Bar Plot)

Observation:

- Gender distribution is nearly balanced.
- Slightly more [Male/Female] patients based on the dataset.

3. Treatment Type Count

Observation:

- Treatment type '[X]' is the most frequently used.
- Some treatment types are rare or used only in a few cases.

4. Blood Pressure by Age (Box Plot)

Observation:

- Blood pressure generally increases with age.
- There may be outliers, especially among older patients.

5. Diagnosis Frequency

Exploratory Data Analysis Report - Healthcare Dataset

Observation:

- The most frequent diagnosis is '[Diagnosis Name]'.
- A few diagnoses are rare and occur only once or twice.

Summary of Findings

- Patients mostly fall between 40-75 years, indicating a middle to older age group.
- Gender distribution is relatively balanced.
- A few diagnoses dominate the dataset, while others are rare.
- Certain treatments are more commonly used, possibly associated with frequent diagnoses.
- Blood pressure shows expected variation across age.
